

VAF

VOLATILE ACIDITY REDUCTION

VAF is our comprehensive volatile acid treatment service. Safely removing excesses of acetic acids and other undesirable ethyl compounds is the most efficient way to improve the quality and desirability of a wine or to correct imbalances in poorer quality yields. Our unique reverse osmosis technology ensures efficient processing while ensuring little impact on the wine or loss of volume.

Flow Rate	up to 4,000 Litres per hour
Operating Pressure	2000-3000 KpA
Temperature	12-18 C
Power	20-32Amp Three phase
Filtration Turbidity	≤ 20 NTU
Site Requirements	Nitrogen, Water, Forklift, Sterile Hoses to and from Tank

Benefits

Efficient - 30% VA reduction on a single pass at rates of up to 4,000 litres per hour

Cost-effective - a diverse range of machines and services available to suit every volume and budget

Quality assurance - single pass with no recirculation, minimal volume loss and no heat increase

Improve your wine - increase quality of even low VA wines
